

INJECTION UNITS SHOT POT SERIES

Plasdan offers the most comprehensive range of add-on equipment in the world. We are unquestionably the technological leader. With the aim of strengthening our leadership, Plasdan has launched the patented E-plate (injection units inserted into plates) for easy handling, space saving and reducing distances that materials have to travel to the injection point. Highly demanding industries such as medical, electronics and packaging require an extremely accurate and repeatable injection process. Plasdan developed the new line of fully electric injection units, capable of injecting below 1 cm³. We can offer these injection units as stand-alone devices or integrated into a completely automated production line.

PATENTED E-PLATE INJECTION UNITS (EP)

Injection points can be planned anywhere on tool.
"Total Freedom for tool design."

E-PLATES ARE A PATENTED PLASDAN PRODUCT OF:

- Compact design.
- Micro shot weight with excellent accuracy.
- Multiple units on same plate.
- Permits integration into sliding tables..
- On stacked tools it can be applied on the centre block to great advantage.
- 3 or more K products are possible on normal IMMs.

E-MICRO Injection Units

Plasdan's new line of fully electric injection units, capable of injecting below 1 cm³ with high tolerance and repeatability.

E-MACRO Injection Units

Shot pots are an especially appropriate design for injecting very large quantities (up to 5kg) when there are space constraints.

MICRO INJECTION UNITS

*1 - The maximum injection and packing pressure are not the cavity melt pressure but injection unit output. The maximum injection and packing pressure are the maximum value that can be set. The maximum injection and packing pressure might be limited depending on the moulding conditions.

*2 - The maximum injection rate and maximum injection speed are theoretical values.

Note: all specifications are subject to change without notice.
